

Monologue on LIVING IN A DIGITAL AGE (UNIT 1)

1. “Any modern advanced technology is does not different from magic”.
2. This quote by Arthur C. Clarke shows what our modern world.
3. In this monologue, I want to talk about the Digital Age and present my own perspective on future development.

2)

1. The Digital Age makes it faster to share and process information everywhere.
2. Modern data can be quantitatively encoded as a series of ones and zeroes and be described in digital form.
3. Digital technologies help to accelerate the transmission and processing of information worldwide.
4. Consequently, this period is characterized by global near-instant exchange of information.

1. Several milestones shaped this era.
2. First of all, the development of fiber optic cables significantly improved global communication.
3. In addition, online platforms enabled interactive consumer exchange for goods and information.
4. Furthermore, digital technologies began to have a profound impact on society.

3)

1. Smart machines are devices in which intelligent systems are embedded in digital environments.
2. They rely on cognitive computing technologies and advanced algorithms.
3. For example, factory robots can work alone without people.
4. I think, such technologies help to automate some human tasks.

1. A medical diagnostic system is a clear example of intelligent technology.

2. It can collect and analyze an unprecedented volume of data within seconds.
3. In addition, many of these systems use machine-to-machine technologies to exchange information efficiently.

4.)

1. A smart city can be viewed as a programmable citywide testbed for innovation.
2. Its smart city infrastructure integrates transport and energy systems.
3. Moreover, cities rely on cloud infrastructure and active Wi-Fi deployment.
4. For instance, advanced 5G network architecture supports real-time services.

3. Furthermore, innovations such as mobile edge computing improve performance.

4. In my opinion, living in such a city would provide comfort and safety.

5)

1. In the future, digital technologies may create fully adaptive smart environments.
2. For example, AI could guess what people need and then control transport, energy use.

6)

1. To sum up, the Digital Age has changed modern society a lot.
3. Smart machines, smart cities, and smart homes make our life easier and faster.
